U.S. Patent and Trademark Office PTOL-303 (Rev. 08-06)

Continuation of 11, does NOT place the application in condition for allowance because: Applicant argues there is lack of motivation to combine the references due to the high temperature process of Hayfield. The examiner is not relying on the schinge of Hayfield for process conditions. Hayfield is included for the teachings of the conductivity of the various oxidations at the sching of the various oxides. Palmgren teaches varying the oxygen contacting the fittinium to control conductivity and Hayfield provides the data for the conductivity of the various oxidation states of titanium. As stated in the previous rejection it would be obvious to one of ordinary skill to produce a mixture of titanium oxides having a desired conductivity.
